Intex pool vacuum hose

Compatible with: 26335EH, 26337EH, 26365EH, 26375EH, 28003, 28003E 3-Ply Material SKU: 10797 Weight: 3.01 LBS Intex Recreation Corp. is dedicated to the safe use of all its products. While all accidents cannot be prevented, practicing good safety habits, setting and complying with the rules, carefully reading manual instructions, as well as vigilant supervision can greatly reduce the likelihood of injury, as well as reduce the severity of injury. Please take the time to review the following information, and make use of the link provided, to help keep you and your family safe from injury. Learn more > Is the Intex pool an above ground or in the ground? Any of these should be kept clean. The best way to get the pool clean is by using a vacuum. Although it is much easier to clean a pool with a skimmer, the pool may not have a skimmer. And that's why we developed this guide on vacuuming the Intex pool without the skimmer. You can also use these steps to clean the above-ground pools. To vacuum Intex Pool Without Skimmer Items you will need the first step - the following are the elements needed to vacuum an Intex pool with no skimmer. A vacuum head – This is a head attached to any cleaning pole. Therefore, when buying a vacuum head, make sure it is a perfect fit for the current pole. Telescopic pole – these poles can be connected to hooks, nets or skimmers. Therefore, make sure you have one in stock. Make sure that the telescopic pole you get can easily access the bottom of the pool. Vacuum hoses – These are universally matching hoses, which means they can fit any of your systems. Remember to make sure you get a long hose that can access every corner of the pool. Vacuum plate or skim vac- this plate will allow you to use the skimmer basket not to get the filter basket. Which means you don't have to stop the pool using a garden hose to vacuum a pool. One of the easiest ways to vacuum the pool is to hook up the garden hose to your system. It is a cheap, efficient and most convenient way to clean a pool above the ground. Steps to follow when using a garden hose to vacuum a small pool Hook up telescopic pole to the vacuum head. Hold a free end of the hose and connect it up to the telescopic pole. Now hold the other end of the hose and connect it to the spigot. Using the right side of the vacuum cleaner, connect the vacuum bag. Start the pool filtration system. Put the vacuum cleaner inside the pool turn on the water flow. Make sure the water completely covers the vacuum. Starting at one end of the pool, slowly and steadily move the vacuum all over the pool in repetitive movements, making sure you are eager for areas with lots of dirt and debris. Be sure to notice when the vacuum loses or reduces suction power if this happens, remove it from the water and empty the bag. If the suction doesn't resume, try to stop and turn it on again after a few minutes. Then you can put the vacuum cleaner back in the water. The last step is to start the filtration unit to remove any remaining particle in the pool. Using the manual suction method of a pool There is another method that you can use to clean the Intex pool manually using a vacuum. That's the way to go about it. First, prepare the vacuum by letting go of all the air inside. Air pockets are among the reasons why a vacuum can lose its aspiration. Therefore, to ensure that the vacuum works for a period of time, remove all air before cleaning. is this done? Connect the telescopic pole to the head of the vacuum, then gently lower it right to the bottom of the pool. Hold the free end of the hose and connect it to a jet. Please leave it to remove the air from the garden hose. If you see bubbles coming out of the vacuum head, it means that the air successfully exits through the hose. When the bubbles stop coming, the vacuum cleaner is ready for use because there is no air. Connecting to the pool pump The vac system works by attaching it to the skimmer unit powered by the circulation pump of the suction process. Before connecting one end of the garden hose to the vac unit, make sure that the filter basket is removed from the pool. After this, you can connect the vacuum hose to the inlet suction located at the skimmer base. Vacuuming the pool All it takes is to move the vacuum through the moving pool back and forth to clean the pool. If you notice the vacuum loose is suction, repeat the steps mentioned above You can get a cleaning robot if you do not like the idea of using your hands. After you have finished vacuuming the pool When you have finished cleaning the pool, detach the vacuum head away from the pole, before draining the water still stuck inside the pole. Hook brush to pole and rub off all debris, dirt, or anything else stuck on the pole. Remove all debris and dirt from the filter basket and give the pool filter a full wash to get rid of all the garbage. Test the pH of the water in the pool to see the chemical composition. Remember to clean any other tool you have used in the cleaning process. After all, this is done, covers the pool. The best cover to use is a solar pool cover that keeps pool water warm as it prevents debris from getting into the pool. Conclusion There are several different reasons why you need to have the best pool vacuum. They will help clean the leftovers in the pool, keep the right amount of chemical balance and act as a filtration system. With all these features, you can easily vacuum the pool clean without a When you're shopping for a vacuum pool, a little knowledge goes a long way to helping you choose the best for you and your pool. Arming with a basic understanding of who they are, how they work, they work, any other accessory needed to complete it will give you the best results. ©2020 Walmart Stores, Inc.
