## Innotek contain and train manual

No-Bark Collars Will My Dog Stop Completely Barking? The bark control collar effectively and humanely stops the entire bark when it is worn. It should be worn only during periods of unwanted bark. Will the bark of another dog set the bark control collar? Not is the bark control collar safe and human? So. The bark control collar is designed to draw your dog's attention, not punishing it. However, the initial static correction can run the dog. Will the bark control collar work for my dog? The bark control collar is safe and effective for all dog breeds and sizes, although it can be too large for dogs up to 8 pounds to wear comfortably. Since all pets are different, training on this system can be started when your pet can learn basic obedience commands, such as sit and stay. The system should be used only with pets over 6 months of age. If your pet is injured or otherwise impaired mobility, contact your veterinarian or professional trainer before use. This Allows you to use another wireless transmitter with overlapping limits of at least 2 m--3 m to get a larger Pet Area. The transmitter signal extends 32m in all directions. A sloping garden can cause the pet area to look less or more than expected. Consider changing the position of the transmitter to maximize the area of your pet. So. There is no limit to the number of pets you can keep with the Stay + Play Wireless Fence. For each animal, you need to purchase an additional receiver collar. Wireless system is effective only for pets who wear a receiver collar. You will need to purchase a separate remote training system. No, contact us here. This product is not intended for use with aggressive pets. If you are not sure if your dog is aggressive, contact your veterinarian or a certified trainer. The Stay + Play Wireless fence can be used as long as the cat can comfortably wear the receiver collar. Stay + Play Wireless Fence is designed to recognize power outages and turn off without turning on the receiver collar. However, if your pet is near the cut-off zone during a power failure, it can get static stimulation. The transmitter will sound intermittent for up to 30minutes to warn you of a power failure. Battery life depends on how often your pet tests the cut-off zone. The receiver indicator light acts as an indicator for low battery flashing from 4 to 5 seconds when you need to change. Yes, you can use any 1.9cm, non-metallic collar. Every day, check that your pet's neck is not irritated from the contact points. Check the contact points of the receiver collar weekly to make sure they are strained and clean. Check the fitness of the collar on a weekly basis. The receiver indicator light acts as an indicator of low battery flashing every 4-5 seconds when you need to change. Check the light of the receiver indicator. yes yes the transmitter inside the metal building can reduce the maximum range of the wireless system. Parking a vehicle in a pet zone can reduce the range of the system and cause your pet static stimulation, if otherwise not if the vehicle were not available. Fixed large metal objects, such as metal shelters, can affect the signal by reducing the maximum system range at the site of the object. As a result, your pet can get static stimulation. This condition is due to the fact that the contact points irritate the skin. Stop using the receiver collar for a few days. If the condition persists for more than 48 hours, contact your veterinarian. When the skin returns to its normal position, change the collar of the receiver and carefully monitor the condition of the skin. As a result, the contact points can be pulled too closely against your pet's neck. Attach the lead to a separate, non-metallic collar placed above the receiver collar. Containment systems FAQ How old should a dog be before teaching it in the system? A leading animal behavioural specialist/veterinarian recommends that the dog be between 4 and 5 months of age until it is trained in the system. How close to the wire dog can go? When the boundary wire is in place, the distance (width of the field) of the controller is set so that the collar unit gives a warning buzzing sound when it is about one meter from the wire. It can be set further if you decide. What do we do to take the dog out of the isolation zone for a walk or in the car? Take the insulating collar from the dog and put the usual collar with a tag and the dog will gladly go with you through the wire. The dog ties the whole thing by wearing an isolation collar. Go home and put the containment collar again and the dog will tell himself , Oh dear!! I have that jolly box on my collar so I'm not going there (across the wire). NB: Wire containment systems are priced with 150m boundary wire (enough to cover 1/4 acre). The SD-2000 system can take up to 5 acres of wire. PetSafe model MMF-3004W can be wire up to 10 acres of FAQ remote instructors – PetSafe ST-100 Is static stimulation safe for my pet? Although static stimulation is unpleasant, it is harmless to your pet. Electronic training devices require the owner's interaction and training to achieve the desired results. How old should an animal be before using the PetSafe ST-100 Remote Trainer? Your pet should be able to recognize the main commands of obedience, such as sitting or staying. The system should be used only with pets over 6 months of age. The receiver collar can be too large for dogs up to 3.6 kg. If your pet is injured or otherwise impaired mobility, contact your veterinarian or professional trainer before use. When my pet is trained and obeyed by my teams, will he have to continue tuner tuner Probably not. It may need to wear a receiver collar from time to time to strengthen. Is the receiver collar waterproof? So. When replacing batteries, be sure to store the area without dirt and debris. Also, make sure that the screws are washed off with the battery cover. Will I get exactly 100m range with PetSafe ST-100 Remote Trainer? The range you get with your PetSafe ST-100 Remote Trainer will vary depending on location, weather conditions, vegetation and transmission from other radio devices. To get the maximum number of ranges, hold the remote transmitter in a horizontal position away from the body. How long can I constantly deliver static stimulation to my pet? The maximum time you can press the stimulation button and constantly deliver static stimulation to your pet is 12 seconds. After that, the remote transmitter timeout will be time-out, and the stimulation button must be started and pressed again. Can I use PetSafe ST-100 Remote Trainers for aggressive pets? We do not recommend that any of our products be used for aggressive pets. We recommend that you contact your local veterinarian or professional trainer to determine if your pet may be aggressive. What if my pet's neck turns red and irritated? This condition is due to the fact that the contact points irritate the skin. Stop using the receiver collar for a few days. If the condition persists for more than 48 hours, contact your veterinarian. When the skin returns to its normal position, change the collar of the receiver and carefully monitor the condition of the skin. Can I add a lead to the receiver collar? Do not attach the lead to the receiver collar. As a result, the contact points can be pulled too closely against the neck of your pet. Attach the lead to a separate, non-metallic collar or belt, make sure that the extra collar does not press the DJK of the contact points of the remote trainers - SportDOG SD-825/1225/1825 is stimulation safe for my dog? Although constant and/or instant stimulation can be unpleasant, it is harmless to your dog. Electronic training devices require the owner's interaction and training to achieve the desired results. How old should a dog be before using SportTrainer? The system should be used only with pets over 6 months of age. If your pet is injured or otherwise impaired mobility, contact your veterinarian or professional trainer before use. Your dog should be able to learn basic obedience commands, such as sitting or staying. The collar receiver can be too large for dogs up to 3.6 kg. When my dog is trained and obeyed by my teams, will my dog have to continue wearing the collar receiver? Your dog may need to wear a collar receiver from time to time to In addition, many hunters keep the collar receiver for their dogs while hunting for maximum control. Is the collar receiver water resistant? So. If the rechargeable battery ever needs to make sure that there is no dirt and debris in the ring and in the groove of the ring. Can my collar receiver be used around saltwater? If the collar receiver is used in or around salt water, after each use, the collar receiver should be washed off with fresh water.
