Opnavinst 5100.12 j

NORFOLK (June 22, 2020) - The Office of the Chief of Naval Operations (OPNAV) has released an updated instruction that strengthens communication and focus toward security. The Navy's Safety and Health Program (OPNAVINST 5100.23H and guidance) is changing the way the Navy approaches safety, said Jonathan Wilson, director of naval safety programs (NAVSAFECEN). Security will now be the center of the agency's attention. The agency's focus is on how the Occupational Safety and Health Administration (OSHA) views the Navy and hold the Navy accountable as an agency. We are committed to complying with the Health and Safety Act (OSH) of 1970, Wilson said. The agency's focus leads to an organization's matrix with shared accountability, authority, responsibility and the subject of security expertise now shared at Echelon Level 2 and below. The updated concept of instruction is better communication. This instruction clarifies the roles, responsibilities and programs to show how accountability, credibility, responsibility and subject expertise are distributed for security, said commander, Naval Security Center, Rear Admiral F. R. Lucky Luchtman. These updates to the Navy's safety and occupational safety program improve our ability to maintain combat readiness and provide a safe workplace for our service members and civilian personnel. OPNAVINST 5100.23H and management provide security professionals at all levels of responsibility with policy guidance, tools and training to maintain operational readiness and sustainability, in accordance with safety laws, regulations and executive orders to operate in safe and health areas of work, as well as overseeing safe practices outside the work area. The format of the instruction is quite different from its predecessor, Wilson said. We now have an instruction that refers to a manual that contains codified guidance to manage security programs throughout the fleet properly. This instruction and guidance drives proactive, frequent communication across the fleet to build awareness and manage security actions. The guide is divided into sections and bookmarks for ease of use. Section A detailed security management systems (SMS), including policies, risk management, security programs provision and promotion. Section B describes the Occupational Safety and Health (SOH) programs. The main themes of the SOH program updated with revision include: Chapter 3 - Organization and Staffing Department 4 - Councils and Committees Chapter 5 - Section 6 - Section 6 - Training Chapter 8 - Chapter 9 - Head of Safety 18 - Head of Hearing Preservation 27 - Limited Space Entry Area Chapter 30 - Internal Quality environment Manual also includes the processing of materials with industrial trucks, air safety , electrical safety, road safety, recreational out-of-service security system for the first time according to a single instruction (Chapters 33 – 38). In addition, the guide codifies how RODS will now follow the SMS concept, asking for OPNAVINST 5100.12J, 5100.24 and 5100.25C to be canceled. The key changes to the instructions that are in the Basic Operating Support (BOS) area. In August 2018, the Defense Department changed its support agreement policy (DOD Instruction 4000.19), requiring host agencies to provide services such as BOS security services. This DODI change was huge, Wilson said. It was game-changing when it came to BOS. That is why we have made changes so that the level of quality support provided to tenants is the same as they would receive or provide their own missions. Bos security services and delivery expectations detailed in Chapter 3 include new requirements to ensure proper identifiable, recording and hazard correction throughout the fleet. The Installation Safety Board (ISC) play an important role in meeting the new requirements, giving installation commanders an overview of the dangers and risks in all their installations. As part of the installation team and tenant safety representatives, MSC monitors deficiencies and hazards, provides coordination to facilitate changes and ensure all inspections are completed. All tenants on Navy installations will work through their Safety Board installations to correct flaws in correct detection, recording and fixing hazards, Wilson said. The revised instructions and manuals represent a significant change in the security program's procedures, and the bottom line in its success will be effective communication. Every Navy employee plays a vital role in creating a culture of property safety and ensuring success, Luchtman said. Communication of feedback up and down operational chains of command, as well as general information about risks, is a must. The Naval Security Center is ready to overcome communication barriers and coordinate successful results. # # # 2013. 22. May plkst. 19:22 - Norfolk, American Savianotis Waltis · OPNAVINST 5100.12J requires commands to configure mentoring programs for motorcyclists.
