Mad 2 ragdoll game

Další podobné hry Elements > Basic > Doll > Ragdoll Ragdoll is an item in the Basic category. It is basically the center of MaD2. Content[show] Description They are the only ones living in the game (unless the living property was used on other items or counts Buffdoll). Ragdolls can not lift up infinite weight, as they can not lift up a single Mjólnir. Other than that, they are able to hold enormous amounts of weight. They can never do things, as said in the official description. However, they can move and swing their arms and legs slightly. Appearance They consist of 12 body parts. 1 Head, 3 Torsos, 2 Arms, 2 Hands, 2 Legs and 2 Feet. Use They are used to be mutilated or adapted. Trivia Every time the game is reset, there is a single ragdoll in the middle of the lab. Seerating a ragdoll head from the rest of the body (or just destroying the head, or moving the head's health bar down to zero) will kill it, which means it won't get up anymore, when the Dolls Stand option is on. But if the head is put back on, they will stand up again By default is ragdoll keymapped to 1. This and the square are items that are favored by default. Players can cut a piece out of a ragdolls head and it will survive. If the cut goes too deep, however; ragdoll will still die. Players can attach body parts to a re-to ragdolls, using joint or revolute tools. This is effective after losing a head and then attaching it again to revive the doll. When the ragdolle's body parts are completely out of health, they can break apart extremely easily. This can be disabled in the settings. Research shows that a ragdoll can survive a shot to the head using health bars and doll status a gunshot only reduces a quarter of health and it just knocks them out/gives them a concussion it will take a minute or to speed it up shock them to get up again, but they can though. It is possible to make it tear apart by quickly dragging it while holding G. A ragdoll appears on the logo of Mutilate-a-Doll 2. It is possible to create a headless ragdoll function without the animate power (the head is invisible, however). If you hold the G on a ragdoll long enough, it will explode. If you hold the G while you drag a ragdoll and there are other ragdolls nearby they will split in two too. Use the ghost force on the head of the ragdoll. Apply the glass force to the head of the ragdoll. Offer ends 1 December About this game MaD2 is a very customizable virtual stressball and physics sandbox about mutilation ragdolls in various ways using an overwhelming amount of weapons and tools. Mutilation Use hundreds of weapons to mutilate disposable fillies designed for weapons testing. (Don't worry, they can't feel anything.) Destroy swing sharp melee weapons, fire firearms, or detonate explosives to dynamically destroy elements, and of course dolls. Unleash forces to burn, crush, transmute, gusts of wind, or even turn the doll into a bunch of cakes. Build Design & Build using a selection of over 2,000 items. All items can be customized by sizing, rotating, coloring, or changing the settings. Connect buttons and other triggers to elements with functionality to build traps and gadgets. Message from DeveloperHello, I wanted to give everyone a fair heads up on some of the technical details of the game for transparency. The game itself is pretty good in my biased opinion and has given some dedicated players hundreds of hours of gameplay, but there are some technical things I for one would want to know when buying a game: MaD2 is an established web game that is being released here packaged with Adobe AIR due to web Flash end-of-life. The resolution is a little strange 1066x600 (16:9) due to being developed online. It can be scaled up and fully screened at the expense of performance. The game is locked to 60fps. It should be reached with a decent system in a reasonably ragdoll-mutilating scenario, but since it is a sandbox game it is very possible to tank fps by doing crazy sandbox stuff. More detailed information about the technical things can be found in FAQ.-rava Minimum: OS: Windows 7Processor: 2GHzMemory: 1 GB RAMGraphics: YesStorage: 40 MB available spaceAdditional Notes: MaD2 is a software accelerated game. Hardware will help, but only up to a point. Recommended: Čeština není podporována Tento product nemá podporu pro Váš místní jazyk.
