9-1 practice graphing quadratic functions answers

The graph and data table are shown below For the graph of an equation, we calculate the range and range and plot the points. Calculate $x = -3, 0, 3$ $y = \frac{1}{3}x^2$ $x = -3$ $y = \frac{1}{3}(-3)^2 = \frac{1}{3}(9) = 3$ $x = 0$ $y = \frac{1}{3}(0)^2 = 0$ $x = 3$ $y = \frac{1}{3}(3)^2 = \frac{1}{3}(9) = 3$ $y = \frac{1}{3}(-3.6)$ $(0, 0)$ $(3, 6)$ We plot the points and connect the graph to the final graph You can help us by reviewing, improving and updating the this answer. Update the response After you request an answer, you have 24 hours to submit the draft. An editor review the submission and either publish the submission or provide feedback. Next answer Chapter 9 - Second-degree functions and equations - 9-1 second-degree graphs and their properties - Practice and problem-solving exercises - Page 538: 14 Previous response Chapter 9 - Second-degree functions and equations - 9-1 second-degree graphs and their properties - Practice and problem-solving exercises - Page 538: 12 Please read the graph. The graph is made from graphics software. Because the a^2 x is positive, the vertex is the lowest point in the chart, $(0, 0)$ is the vertex.
