Summer reading 2020 high school

If you're thinking about how you want to spend your summer vacation, sitting in a classroom isn't probably the first thing that comes to mind. However, summer school can be a great way to get on in high school and give yourself an advantage over college admissions. Nowadays students of all kinds of classes take summer classes. You can take summer school to understand a specific topic better, to release more time on your schedule during the school year or to take an advanced class at your high school, near college or online. Read this complete guide for high school students to learn everything you need to know what a summer school is, why people take it, and how you can use it to move forward. What is summer school? You probably know that summer school refers to classes used by students in summer, outside the normal academic school year. But specifically, summer school for high school students can have many different things: This may be the way you return to class you've found difficult, take specialized courses in areas that interest you, get a head start on prerequisites and college classes, and more. Summer school can be through classes at your high school, community college or local university, or through a program that includes classes, such as summer camp. Online summer school, where students take classes mainly on a computer at home, is becoming increasingly popular. Many of these classes require students to visit school once or twice to take exams or turn on final projects, but some classes are also offered entirely online. Online classes can be offered through your high school, college or university, or through a specialized online high school program. Why do students take summer school? As mentioned above, there are several reasons why a high school student would take classes in the summer. Below are the three most common reasons: Reason 1: Improving their grades Historically the most common reason that people took summer school was that they needed to improve their grades in one or more classes. There are still many students who take summer school for this reason, and many of them find it easier to earn better grades in the summer because summer school often has smaller classes, more one-on-one interactions with the teacher, and fewer distractions, as other classes, school sports, or clubs worry about. Reason 2: Take specialized classes Sometimes students also take summer school classes to take a certain class they would not be able to enroll during the school year. It can be a class they don't have room for in their schedule or specialized class, such as, of course, a specific topic or an intense foreign language course. Some schools also offer short certificate programs in the summer. These may include a wide range of such as entrepreneurship, computer science and more. Sometimes, in summer, schools offer classes that they do not usually offer during the school year. You'll probably have an even broader range of summer school class options if you look at classes at community colleges or online. Having a specialized class allows you to learn more about the topic you are interested in and will help you gain new skills and knowledge. Reason 3: Getting ready for College Summer School will help you get a head start on the rest of your education, including college. Some students take summer school as a way to get prerequisites out of the way so they can take more advanced classes during the school year. In my high school, every student had to take a basic display before they graduated, and many students took this class in the summer because it wasn't very complicated and could be taken online. It gave us extra space in our schedule to fill the elective that we wanted to take. You can also take community college classes in the summer, which you may be able to get high school or college credits for. These classes will help you get more used to what college classes are like so that you feel more willing and confident when you start college. Having college classes, even introductory classes in community college, also strengthens your college applications because it shows schools that you can handle the rigours of a college course. How can you do well in summer school? Whatever the reason you go to summer school classes, it's important that you do well in them. They take advantage of some of their essential daylight saving time, and you want to make sure that you don't waste that time doing poorly in classes. Summer school classes are slightly different from classes taken during the school year, and there are some strategies that can be used to maximize your chances of success. Tip 1: Take fewer classes at a time, if you absolutely need to take multiple classes to finish, it's a good idea to take only 1-2 classes during summer school. Summer school classes are often shorter than normal classes (often 6-8 weeks long, compared to the whole semester), so they are usually more intense and require more time for dedication. Taking fewer classes is especially important if you're taking a particular class because you'll be able to focus more on your time and energy to get to the upper class this time when you don't have other classes to worry about. One of the most important parts of your college application is what classes you choose to take in high school (along with how well you do in those classes). Our team of PrepScholar admissions experts have compiled their knowledge of this common guide to planning your high school course schedule. We advise you on how to balance your schedule regular and honors/AP/IB courses on how to choose your extracurricular, and what classes you can't afford not to take. Tip 2: Create a study schedule Taking summer classes can be difficult. There's probably a lot of things you'd rather do like seeing your friends, being outdoors, sports, etc., and it can be easy to get distracted. Either before or immediately after starting summer school, create a study schedule that allows you to plan when you will spend time studying and homework. If you can cancel each day at the same time, for example, from 4am to 5.30pm each afternoon, that may make it easier to stick to your survey schedule and plan other activities. Set goals that you want to achieve every day or week, whether it's a project you need to accomplish, read the papers, or just general learning and homework. On the other hand, make sure you're giving yourself enough time to take a break and relax. Summer school can be demanding, and if you overtax yourself, you may end up being burned out by the time the school year begins, which you don't want to do because it can cause your other classes to suffer. If you need help creating a study schedule, ask your parent or teacher for instructions. Tip 3: Ask for help in Early Summer school classes are often smaller than normal classes, and that means you have more interaction with the teacher. Use it to your advantage by asking for help early if something drives you or doesn't make sense. Especially if you take the class you fought before, you want to make sure you don't repeat the same mistakes you made the first time. Teachers are happy to help students who ask, and they don't think all the questions you ask are, so don't be afraid to let them know you need to explain something more or differently. If you've already taken the class before and know which areas you fought in, you might want to tell this to your teacher early so they can prepare you for the topic better and maybe give you some additional material to look over to make sure you understand the topic. Asking your teacher for extra help as soon as you don't understand the material that will help you keep your grades up in summer school. Should you go to summer school? If you don't know whether to take summer school, ask yourself the following three questions: If any of the scenarios apply to you, you can consider summer hours. In each scenario, the best way to take these summer classes is also mentioned, so you can be sure that you can benefit from what you want out of summer school. Question 1: Do you want, or is it necessary, to improve your grades? Does your transcript have a particularly low grade that you want to delete? If you did badly in a certain class, summer school is a great way to redeem yourself and take the class (hopefully!) for a better grade. Even only one particularly low grade, such as D or F, really downgrade your GPA and hurt your chances of getting into competitive colleges. Even if the class reappears in your transcript, if you have a good grade it a second time around that looks a lot better than having a very low grade. Best choice: If this is the case for you, you will probably take your summer school classes through your high school to improve your class in a particular class. Question 2: Are there any specific classes you are interested in having? Is there any class you want to take that is only offered in summer or do you not have time to take during the school year? Summer school can be a way to fit it into your schedule. You can get creative here and take a class of photography, desert skills, foreign language, or a different kind of interest you have. Summer school doesn't have to be boring! Best choice: Depending on which classes you're interested in, you can take them through your high school, community college, summer program or online. Talk to your academic advisor if you're not sure what lessons to take and want to know what your choices are. If you're taking classes that aren't in your high school, make sure you understand exactly if and how you can credit them. Question 3: Do you want to get on with the classes? Are you trying to get prerequisites out of the way or do you want to take advanced classes to improve your chances of getting into competitive college? If so, having summer classes may be the way you have more space in your schedule for other classes, strengthen your transcript, and be more willing in college. Best choice: If you try to take some preconditions in the summer, you'll likely get them through high school because courses conducted by other schools may not meet prereq requirements. If you want to take classes to prepare you for college, you will likely take them to a community college or a nearby university. You may also be able to take advanced summer classes through your high school. Are you an online summer school? Online summer school high school students are becoming more and more popular, and it's easy to see why. Online classes often allow you to do schoolwork on your schedule and reduce time and travel to class. But is online summer school a good idea for everyone? Online classes can have several drawbacks, including the following: Less direct communication with a tutor Requires more self-motivation It may be more difficult to understand when you're trying to decide whether to take a summer school online, you should talk to people who know their learning habits, such as teachers and parents, to help make the best decision. However, in general, you should not take online summer school classes if you find it difficult to motivate yourself to learn and complete work at the right time, or if you struggled hour before and you want more instructions and interaction with the tutorial. Both issues can be sharpened in online classes. You should also base your decision on how difficult you expect the class to be. For a relatively simple class, you have to take as a basic graduation requirement, such as typing or health, online classes are likely to cause you fewer problems than if you were having a more complicated course. Because the class you take isn't so difficult, you can address issues that online classes can sometimes create, and you'll be able to easily get the class out of the way and focus on tougher classes during the school year. Summary There are many reasons students take summer school, whether it's improving their grades, taking a certain class they couldn't take during the school year, or getting more ready for college. Summer school can be taken through your high school, community or local college, or through a business or organization that offers summer lessons. Most summer hours are inside people, but online classes are becoming more and more popular. You don't want to waste your summer taking a class you end up not doing well in order to get good grades in summer school, you should limit the number of hours you take, create a study schedule and ask for help early if you don't understand the material. If you're not sure if you should go to summer school or don't know what lessons to take, talk to a teacher, parent or academic counselor to find out what's best for you. What's next? Want to know more about online high school? Check out our guide online for high school and learn if this is the right choice for you. Is there a certain class you want to take, but does it not offer your school or do not fit your schedule? You may be able to take an independent study! Read this guide on everything you need to know about independent lessons and how to take it yourself. Trying to decide whether to take an AP class or a class community college? We go over the pros and cons of each to help you make the best decision. Do you want to improve your SAT score by 160 points or by 4 points? We have written a guide for each test on the top 5 strategies you need to use to have the opportunity to improve your score. Download it for free now: now:
