## Oversized outlet covers

This discussion comments on some of the apparent contradictions about memory formation, as Slavin addresses them. To accept the value of her story about herself getting clearer and authentic, the patient had to tolerate the fact that now she was with someone who thought her psychological life was important, and the confrontation that she was deprived of this crucial relational element during her development. The discussion ends with his own argument (supporting Slavin's position) that memory is a term we use to refer to a set of ongoing mental processes, inherently paradoxical and sometimes contradictory and their results. We continue to try to get rid of the tension of this by creating an idiosyncratic version of a completely assembled puzzle on the cover of its box and treating it as what would appear if all the pieces in the box were actually assembled. We do not notice that some pieces are missing, that we continue to talk about a section as if it were the whole puzzle or that some pieces obviously (for others) were forced together. In a way, we always try to remember that we remember. The information in Psychology Today is provided exclusively by participating therapists. Slavin, psychoanalysis, relational experiences In April 2006, an 88-year-old Austrian artist met with a journalist and recounted a consultation she had with Sigmund Freud 70 years before, when she was 18 years old. It changed my life! The story of this meeting is amazing. In these two days of workshops we will tell you this story. And in short reviews, short clinical vignette videos and active discussions with you, we will look at what we could learn from this story about the role of the personal agency in human development, the intersubjectives that face in treatment, as well as the place of mind, body and sexuality in new relational psychoanalysis. These Saturday and Sunday workshops are part of one body of thought, so we encourage participation in both. For those whose circumstances can only allow participation on Sunday, we will do our best to be clear and comprehensive. Click here for full information about the program. Presenters: Jonathan H. Slavin, Miki Rahmani - Moments of Truth in Psychoanalytic Treatment - Linda Beeler - Mutual Discoveries Emerging from Secrets, Lies, Truths, and Sleeping/Death Truths: Now Moments in the Clinical Space of Edie Boxer (USA) This chapter highlights the potential healing ability to collaborate with the analytical relationship by incorporating the patient and analyst's unique subjective experiences. A clinical illustration focuses on a moment in a session in which the author realized that she was getting more sleepy, after which her patient confronted her: Sleep! The author writes that the patient deserved an answer, but followed a major break in the relatively new relationship that was never to be repaired. However, although their interaction, the author was able to recognize and use her own emotional experiences deeply felt to reflect and try to respond to her patient in a humane way. The author's personal process also revealed the work between her and another patient who could enter and develop a relationship that allowed conflict resolution after the derailment (a moment now) that led to more understanding and connection, a moment of encounter.
