Recommendation: Great, sturdy cabling works well. • Thanks para1131 December 10, 2012 treky92 model / year: 2011 Pro: easy reading display, easy to change screen, exact disadvantages: heavy, too durable, no stem mount options recommend! This is a good default computer, but don't expect it too much. It's worth $20 because of the computer. The mine's sensor stopped working after eight months. Reply • October 5, 2012 Kimmeareis Pro: Like Mitty, Enduro is a simple yet great bicycle computer! The cable is a little more burly good, and it looks much more neat on my bike! Its very user friendly and there are good resources to figure out how to dial on tire size on a web page! Cons: Don't say anything! Recommendation: I will spend extra $ and get enduro through Mitty! Reply • Thank you to the guest pro on March 18, 2010: I have two, and it lasted a long time. Cons: There is pain when you need to change the K to M or tire size. The IOW program is not a simple recommendation: I will not buy them back replies • Thanks guests January 25, 2010 scout_about Pro: installation is easy, accurate, well built, and tough. Cons: No recommendation: For money I think it is one of the best bike computers you can buy. It's a walkway without problems and take on all sorts of weather conditions. It is easy to use. We know that the manual doesn't tell you how to switch from Km to Mph. You need to push three bottones at the same time. Reply • July 11, 2009 scout_about ebm62980 Pros: Works as intended and is easy to install. Sensors and magnets keep them put through rough terrain. Cons: So far, no one. Recommendation: Solid computers that are not too expensive. Reply • July 11, 2009 ebm62980 It works as intended and is easy to install. Sensors and magnets keep them put through rough terrain. Cons: Not recommended so far: solid speedometer. Not too expensive. • Thank you guest for replyjuly 1, 2009 bstill30 Pro: easy to install, the setting is right forward. Cons: None. Recommendation: Cheap, easy to use and works well with trail bikes on technical terrain. Reply • Thanks bstill30 bstill30
