Chevrolet S10 Body Kits are considered one of the most effective ways to change the look of your vehicle. You can buy a body kit to make your plain vanilla honda civic look like a sporty high-end BMW M3. You can make your Mustang look like a rally car in your face with huge fog lights and a Big Mouth style front bumper. Considering that Chevrolet S10 body kits can make your car completely unique, they are probably the most effective way to customize the look of your ride. We get asked these questions all the time. Read this to get more informed about Chevrolet S10 body kits: Question: What are Chevrolet S10 body kits made of? Answer: Most body kits are made of fiberglass, polyurethane, or ABS plastic. Question: What is the difference between them? Answer: Everyone has its pros and cons. Take a look: Fiberglass Body Kits - These are the most common body kits by far. The main reason is because they are the most profitable to manufacture. The fiberglass body kits are almost all handmade, and for this reason, they don't have the same fit and finish accuracy as, say, your machine bumpers designed by the MACHINE. In addition, most fiberglass body kits will not withstand a fender-bender as well. for example, polyurethane body kits. That being said, the paint adheres really well to the fiberglass, and the fiberglass does not deviate, even in the most extreme weather conditions. In addition, they are the most affordable type of body kit available. Additional note: some companies have introduced high-end fiberglass body kits that use a specialized flex resin that gives bodykit-buyers the best of both worlds: durability and affordability. An example of this is the Duraflex brand of body, body, is probably the most popular-selling line of body kits we offer. Polyurethane Body Kits - Poly-uurethane (also simply called urethane) is a technical word that essentially means rubber. Urethane body kits are more expensive than fiberglass kits because they cost much more to make. The cost of developing a proto-type and mold for a complete urethane body kit is about 12 times that of a fiberglass body kit. Urethane body kits are made from sturdy moulds and are machine-made, so the finishing accuracy is normally solid. In addition, urethane body kits can actually withstand small accidents and remain tactful. There are some withdrawals to urethane body kits though: 1) The paint doesn't stick to them particularly well, so it takes extra elbow oil to get them painted properly, 2) They are prone to deform in extreme weather conditions, so you should consider garaging them sometimes depending on where you live , and 3) They cost much more than fiberglass body kits. ABS Plastic Body Kits - ABS plastic body kits are the closest thing you'll find to what your own vehicle is doing. Many automakers use ABS plastic to make body panels. ABS plastic body kits are machine-made. They are easier to paint than polyurethane body kits, but not quite as flexible; they are more resembling of your factory body panels. Like polyurethane body kits, ABS plastic body kits are significantly more expensive than fiberglass body kits because they are much more capital-intensive to design and create. Question: Which brands of Chevrolet S10 body kits are the best? Answer: It depends on what body kit material you want. Here are our votes. Fiberglass: Extreme Dimensions (Duraflex) body kits, Bomex body kits, Select body kitsPoly-urethane version: Xenon body kits, Wings West body kits, JP body kits, KBD body kitsABS Plastic: Razzi body kitsChevrolet S10 Ground Effects are considered one of the most effective ways to change the look of your vehicle. Some of the most popular are mustang ground effects, Camaro soil effects, and firebird ground effects. Something else to know is that there are many different terms that essentially mean the same thing: ground effects, body kits, ground effects kits, car ground effects, and effects ground of trucks. It seems that the terminology you use for a Chevrolet S10 ground effects kit might depend on which part of the country you are. If you see a package of Chevrolet S10 floor effects that you like and have questions about it, or you may not seem to find floor effects kits for your car or truck, please contact us at any time. Q: What is the difference between fiberglass and polyrethane body kits? A: The difference between fiberglass and polyurethane body kits is that they are made from different composite materials. Both types of materials have positive qualities. Urethane is a which is very flexible and will hold up well in the event of an accident. Urethane is therefore popular for its durability. Fiberglass body kits in general are less flexible than urethane body kits (although this certainly depends on the manufacturer), but are more resistant to extreme weather conditions. In addition, the paint adheres very well to the fiberglass, so there will probably be no paint problems with a fiberglass. Finally, fiberglass kits are relatively inexpensive. Both composites are widely used worldwide for body kit manufacturing, and each has proven to be very popular. Q: I see the same style of body kit listed under different brands. What's the difference? A: Indeed, you will sometimes see the exact same style of body kit listed under two or more different brands on our site. In this case, it means that the same style is just done by more than one manufacturer. Each of the body kit manufacturers whose product range we carry is an elite body kit brand, but each has its own unique manufacturing process. Find out more about this manufacturer section under the detailed list of products for each brand to learn more about each brand. Don't hesitate to contact us to ask any more questions you may have. Q: What do all body kits come with? A: Complete kits usually include the front bumper, side skirts and rear bumper. Look at the description of the body kit to see exactly what is included. Some kits are available with fender rockets, wings (spoilers), hoods, or other stylish accessories. Q: Are body kits and ground effects the same? A: Yes. Ground effects, body kits, spoiler kits, bumper kits and aero kits are all terms that mean exactly the same thing. Q: What exactly is a body kit? Why buy a body kit? A: A body kit is essentially a collection of parts that, when installed on your car, change its appearance. Most body kits change the appearance of front and rear bumpers and rocking panels on a car. Many body kits consist of custom bumpers that replace your factory bumpers, while others include lips or fascias that you add to your factory bumpers. Almost all body kits are available with sideskirts that are installed on top of your factory rocker panels. Body kits often create the look of a lowered vehicle and can give your car an aggressive look, a super-clean fluid look, or a race car, to name a few types of models. Of all the modifications available, body kits probably have the greatest impact on the appearance of a car. Installing a body kit on your car will completely change the look of your car, and will definitely turn the heads of the people you drive on the street! Q: Do you put a body kit on your factory bumpers, or do you replace your factory bumpers with a body kit? A: Some body kits are with bumpers that replace all of your factory bumpers while others are with add-on lips that attach to your existing bumpers. It all depends on the and the style of the body kit. Q: Do body kits adapt to or replace existing bumpers? A: Most body kit bumpers will require you to remove your original factory bumper covers and replace them with those you purchased (normally you use the same equipment from your factory bumpers to install the new body kit bumpers). If your body kit includes front and/or rear lips or fascias, the front and/or rear parts will attach under your existing bumpers. Q: Are body kits strong enough for a daily driver, or are they just for show cars? A: Body kits are very strong when installed properly. Of course, fiberglass can indeed crack if in a fender-bender or if you hit a sidewalk too hard, but in general, they will last you a long time. For an extra level of strength, consider going with a urethane body kit if available for your vehicle. Q: Can I mix and match the components of the body kit if I don't like a particular piece? A: Yes, absolutely! Keep in mind that it is best to try to stick to a brand, however, that additional shipping costs can be incurred if the parts come from different warehouses.
